I, Everett Gunnlaugsson, claim:

1. An Arrowhead extractor for extracting threaded arrowheads from dense objects such as trees and shrubs and said extractor consists of a circular disk having three (3) extracting thumb screws for providing outward thrust from the embedding surface;
2. The arrowhead extractor of claim is three (3) inch in diameter circular disk of .225 inch thick steel;
3. The arrowhead extractor of claim has three (3) $\frac{1}{4}$ x 20 threaded holes located one (1) inch from center hole and spaced equally apart;
4. The arrowhead extractor of claim has a center hole threaded to 10/24 to fit the threaded shank of a detachable arrowhead;
5. The arrowhead extractor of claim has three (3) $\frac{1}{4}$ x 20, three inch long thumb screws used to provide outward thrust for removal of an embedded arrowhead;
6. The arrowhead extractor of claim providing the extracting of threaded shank arrowheads from dense objects and said arrowhead extractor comprising:
 - A substantially flat, circular disk having a smooth surface and which is threaded onto an embedded arrowhead via center hole;
 - Three (3) thumb screws threaded into the circular disk via the outermost holes of disk which is attached to the embedded arrowhead;
 - Turning of the three (3) thumbscrews in a clockwise direction brings the screws in contact with the embedding surface and provides outward thrust to the disk and subsequently to the arrowhead to which said disk is attached, allowing for retrieval and re-use of said arrowhead.
7. The arrowhead extractor of claim having three (3) thumb screws allows user less effort and more outward thrust in the retrieval of embedded arrowheads.
